DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Species I, claims 1-6, in the reply filed on 11/30/09 is acknowledged.

Claim Objections

2. Claim 6 is objected to because of the following informalities: Claims 6 reintroduces "a plurality of spraying holes" in claim 5. This is a double inclusion. Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. Claims 2-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 2, line 6, "the engagement" lacks antecedent basis.

In claim 3, lines 2, 6 and 9, "the adapter", "the bottom", and "the additive container", respectively, lack antecedent basis.

In claim 4, line 2, "the communication means" lack antecedent basis.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1-5 are rejected under 35 U.S.C. 102(e) as being anticipated by Williams-Lucas et al. (2005/029653). Williams-Lucas discloses, in fig. 13, a bottle comprising a bottle body 12 having a mouth and an external thread, an additive container 510 defining an accommodation space, an adapter or mixing means 516, a cover 588, a top cap 485 (see fig. 12); wherein the adapter comprising an outer cap having an internal thread, an inner cap 582 provided with a communication hole 577 at the bottom; a connection 566 provided with a locking groove; the additive container comprising a first protrusion 558 having locking ring, and a second protrusion 576 inserted into the inner cap and having a drain hole 584b; the additive container integrally provided with a guiding conduit 575 having a plurality of holes 578.
